

DIGITAL SOUND AS YOU'VE NEVER HEARD BEFORE

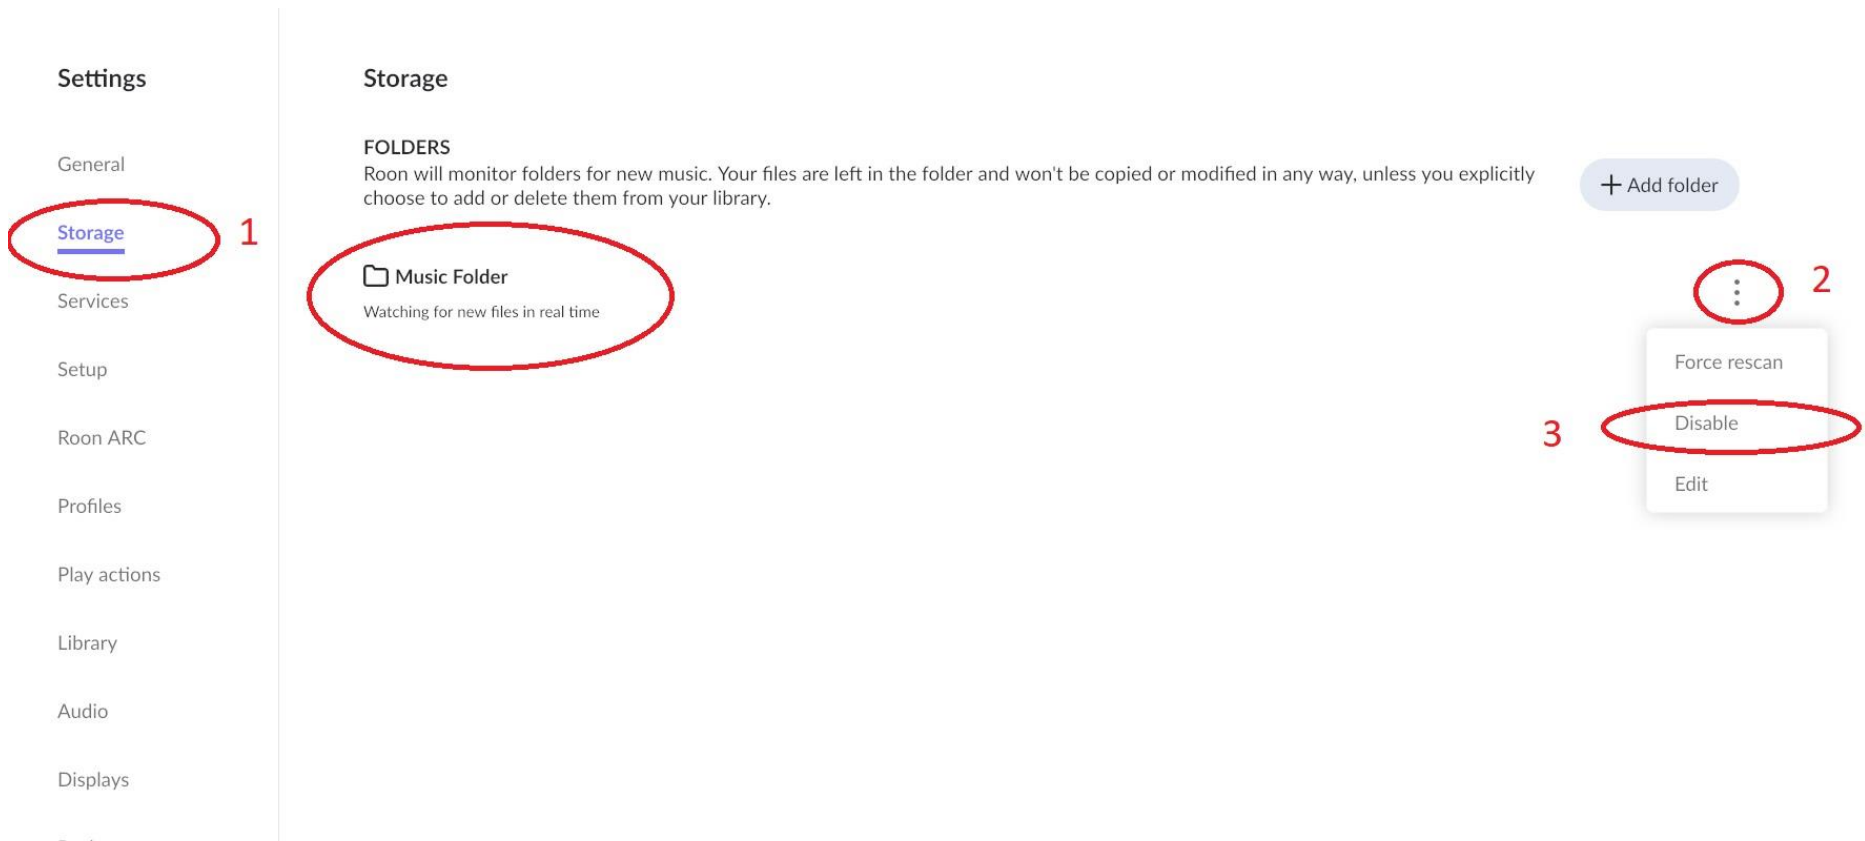

Constellation Room Tips (English) v1.0

Roon Tips

This guide will help you to get the best of Roon Software with Pachanko Labs products.

1. Disable the Default Music Folder
2. Disable System Output
3. Set Roon Background/ On demand Audio Analysis to Off
4. Enable WASAPI Exclusive Mode (When Using Direct USB Connection)
5. Remove All Filters and DSP

1. Disable the default music folder

2. Disable System Output

The screenshot shows the Windows Settings application with the 'Audio' section selected in the left-hand navigation pane. The 'Audio' page is titled 'Audio' and shows 'This PC' as the selected device. The 'System Output' option is highlighted with a red circle and labeled '1'. A red circle labeled '2' highlights the gear icon next to 'System Output'. A context menu is open over the gear icon, with the 'Disable' option highlighted by a red circle and labeled '3'. Other audio devices listed include 'Pachanko Diretta ASIO' and 'Denon AVC-X6500H (Denon AVC-X6500H) via AirPlay, 192.168.1.40'. The 'Realtek(R) Audio WASAPI' device has an 'Enable' button.

3. Set Roon Background/On Demand Audio Analysis to Off

The screenshot shows the Roon settings interface. On the left is a sidebar with the following menu items: Settings, General, Storage, Services, Setup, Roon ARC, Profiles, Play actions, **Library** (circled in red with a red '1' next to it), Audio, Displays, Backups, Extensions, About, and Keyboard shortcuts. The main content area is titled 'Library' and contains several sections: 'Import settings' (with a 'View' link), 'Un-merge artists' (with a 'View' link), 'Un-merge compositions' (with a 'View' link), 'Genre mappings' (with a note: 'In order to use this feature, "Use genres from file tags" must be enabled in import settings.'), 'Skipped files' (with a 'View' link), and 'Library maintenance' (with a 'Clean up library' button). Below these are two settings: 'Background audio analysis speed' (with a description: 'Music files in your library are analyzed to generate the data that drives volume leveling, crossfade, and waveform displays.') and 'On-demand audio analysis speed' (with a description: 'When a music file that hasn't yet been analyzed is played, analysis is performed on-demand.'). Both of these settings have a dropdown menu set to 'Off', which is circled in red with a red '2' next to the first one and a red '3' next to the second one. A red box highlights the two settings and their descriptions.

4. Enable WASAPI Exclusive Mode (When Using Direct USB Connection)

5. Remove All Filters and DSP

Make sure that no filters/DSP are set and enabled
